

# NCI-Children's Oncology Group Pediatric MATCH Trial\*

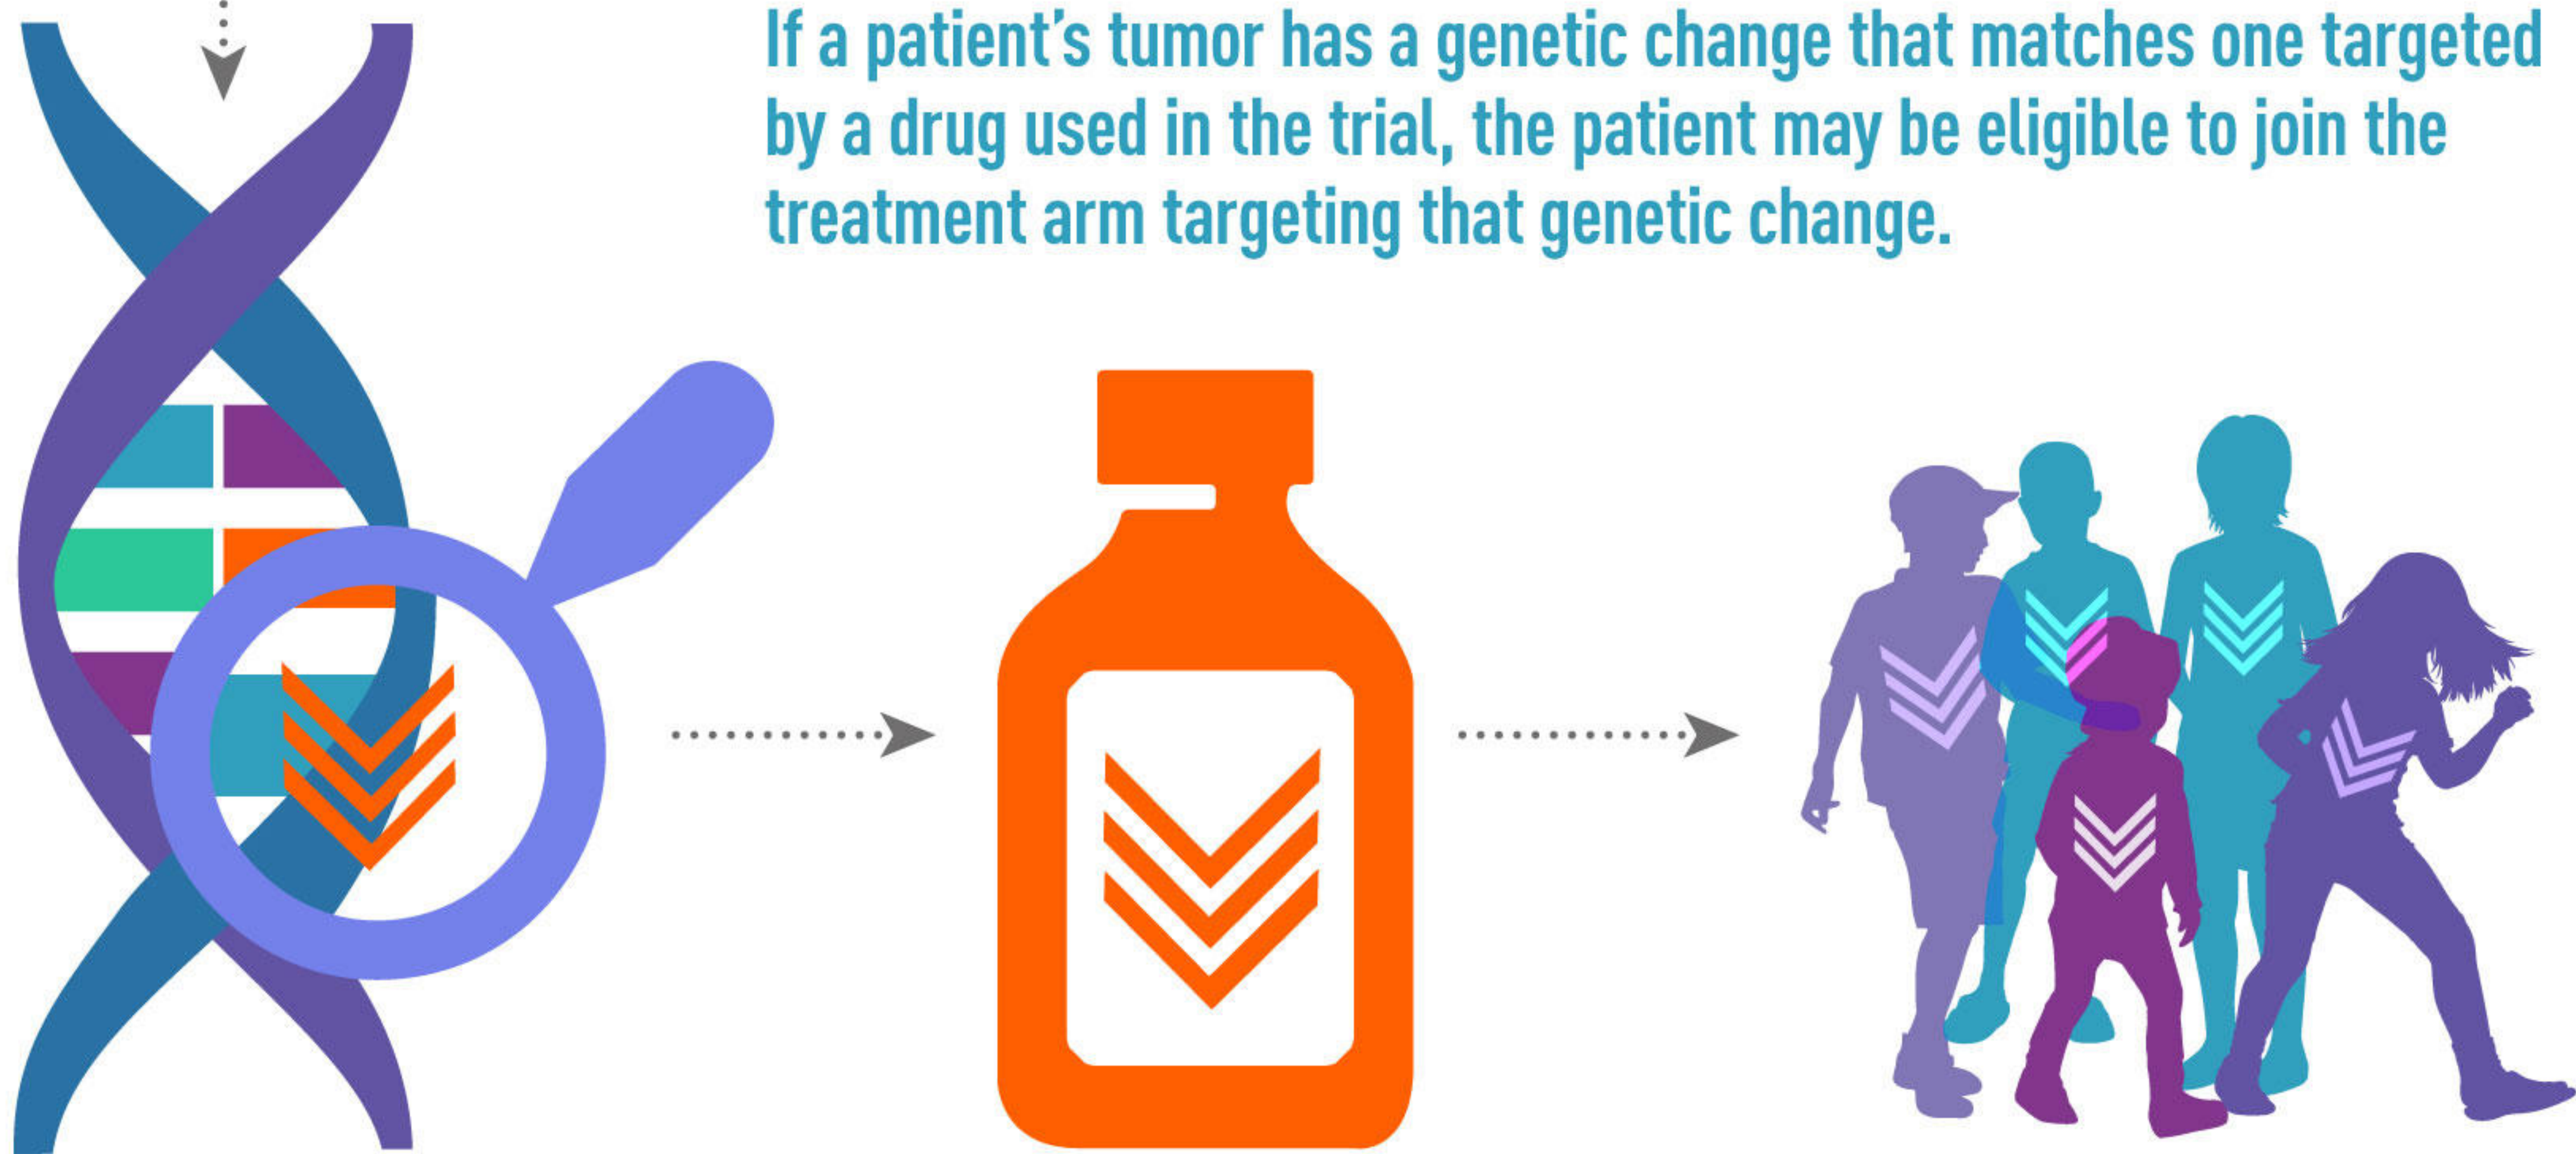

This precision medicine clinical trial, funded by NCI and conducted by COG, matches children and adolescents with treatment based on genetic changes in their tumors.

**Pediatric MATCH is for patients ages 1 to 21 who have both:**

- Solid tumors, including lymphomas and brain tumors, or histiocytoses
- Tumors that no longer respond to standard treatment or that have come back after treatment

If a patient's tumor has a genetic change that matches one targeted by a drug used in the trial, the patient may be eligible to join the treatment arm targeting that genetic change.

Talk with your pediatric oncologist about whether this trial would be an option for your child.
